BACKEND DEVELOPER / DATA SCIENCE STUDENT – *building intelligent infrastructure, data pipelines, and production-grade systems*

Results-driven Backend Developer and Data Science student with hands-on experience architecting REST APIs, full-stack platforms, and AI-integrated applications deployed on real production infrastructure. Proven ability to deliver end-to-end solutions—from database design and secure authentication to Dockerized deployment, AWS integration, and data engineering at scale (10M+ record pipelines).

Technically proficient across Python, Java/Spring Boot, Go, PostgreSQL, MySQL, React, Next.js, Flask, FastAPI, Docker, Nginx, AWS S3, and modern AI stacks (Gemini, RAG, LightGBM). Combines rigorous software engineering with data science fundamentals (Pandas, Scikit-learn, visualization) to build systems that are secure, observable, and built to scale. Available for backend, full-stack, and data engineering roles.

PROFILE SUMMARY

- Backend and full-stack engineer specializing in API design, RBAC/JWT security, and cloud-ready deployments.
- Designed and shipped production systems for education, healthcare, e-commerce, and real-estate intelligence.
- Strong data engineering background: large-scale ingestion, cleaning pipelines, forecasting, and analytics dashboards.
- Experienced with containerization (Docker), reverse proxies (Nginx), VPS hosting, SSL, and CI/CD workflows.
- Comfortable integrating LLM/RAG modules and ML models into user-facing products with measurable business value.
- Collaborative, documentation-minded developer; internship experience in software development at AIOT Inc.

CORE COMPETENCIES

- Backend APIs & Services
- Spring Boot / Java
- Python / Flask / FastAPI
- Full-Stack Development
- React / Next.js
- REST & JWT / RBAC
- Databases & SQL
- PostgreSQL / MySQL
- Schema Design & Optimization
- Data Engineering
- Pandas / NumPy
- ETL & Dataset Harmonization
- Machine Learning & AI
- Scikit-learn / LightGBM
- RAG / Gemini Integration
- DevOps & Deployment
- Docker / Nginx
- AWS S3 / VPS / SSL
- Data Visualization
- Plotly / Dash
- Matplotlib / Streamlit
- Languages
- Python, Java, Go, PHP
- JavaScript, SQL, C/C++
- Tools & Practices
- Git / GitHub
- Agile Delivery / Code Review

PROFESSIONAL EXPERIENCE

Independent Engineering & Portfolio Projects, Ho Chi Minh City, Vietnam

2024 – Present

Backend / Full Stack Developer

- Created Kamisori Local Clothing Brand Website. (Role – Supabase Backend , RLS writing , and clean infrastructure) , Link = [Kamisori](#)
- Name Card WordPress plugin (NFC, analytics) with emphasis on security and data integrity.(AIOT company internship experience).
- Architected Rental Property AI Platform processing 10M+ rental listings across 40 cities with demand forecasting and gap analysis (Python, Flask, Scikit-learn, Next.js).(2026 Datastorm Vietnam Hackathon Finalist Top Ten).
- Built Ultimate ByteMe: Pan-Asian Real Estate Intelligence for Synergia International Conference 2026—LightGBM valuation, investment scanner, RAG assistant (Qwen2.5/Gemini), and data curation lab.
- Delivered production deployments showcased via live server infrastructure (Docker, Nginx, VPS, SSL, CI/CD) at [Products Showcase](#).
- Implemented Inventory Rescue which is a simple web app for food businesses. It helps you sell food that is close to expiry instead of throwing it away.
You get one place to list extra bread, cakes, meals, or groceries and let nearby buyers see and reserve them. Link = [Inventory Rescue](#)

Saigon Business School (SBS), Ho Chi Minh City, Vietnam

2025 – Present

Full Stack Developer – Academic Platform

- Engineered SBS(Developed for Saigon Business School) Student Serving System: Spring Boot 3 REST API, React 18 frontend, JWT authentication, and RBAC for students, lecturers, and administrators.
- Implemented Docker containerization and AWS S3 integration for scalable file and media handling.

Healthcare & Research Engineering Projects

2024 – 2026

Full Stack Developer

- Built Dental Blinding & Age Estimation platform for University of Dental Medicine, Mandalay - pediatric OPG analysis using AIQahtani and Demirjian methods with supervisor/PI blinding workflow (Flask, PostgreSQL). Link = [UDMMProject](#)
- Life Hub – a personal app that is “Your day at a glance — reviews, renewals, habits, files, and hangouts.”. Link = [Life Hub App](#)

AIOT Inc., Vietnam

Internship

Software Development Intern

- Contributed to software development initiatives focused on robust backend integration and production-quality code practices.
- Collaborated with engineering teams on application structure, performance, and maintainable service design.

Other Analytics & Hackathon Projects

2025

Data Engineer

- MoMo Service Analytics: Plotly Dash application for service performance and demographic trend analysis (Python, Pandas, Plotly).
- Maintained Kaggle analytics showcase (Streamlit) covering exploratory analysis, visualization, and predictive modeling workflows.

EDUCATION

**SAIGON BUSINESS SCHOOL, Ho Chi Minh
City, Vietnam**

Expected 2027

Bachelor of Data Analytics and Computing

**UNIVERSITY OF COMPUTER STUDIES,
YANGON, Myanmar**

2022 – 2024

BSc Software Engineering

SELECTED TECHNICAL PROJECTS

- Kamisori Local Brand E-commerce Website
- SBS Student Serving System – Spring Boot 3, React 18, JWT/RBAC, Docker, AWS S3
- Ultimate ByteMe Real Estate Intelligence – LightGBM, RAG, Next.js, Flask, Ollama
- Dental Blinding process Project for University of Dental Medicine Mandalay.
