

SITT MIN THAR

github.com/SmtTheSE | sittminthar005@gmail.com | sittminthar.from-mm.dev

EXPERIENCE

- Software Engineer | Ad Venture Studio** **2026 -- Present**
- Building and shipping mobile apps for App Store and Google Play, owning product engineering, store releases, and app infrastructure
 - Partnering with design and monetization leads on UX, performance, and retention-oriented product engineering
- Business Analyst (Onsite) | VNG** **2026 -- Present**
- Business Analyst, part of the outsourcing partner delivering an AI-enabled Legal Operations platform onsite at VNG for their Legal and Compliance function
- Founding Engineer | Bravestep** **Present**
- Founding engineering role focused on systems direction and product infrastructure
- Release-Acceptance Engineer | Malibu** **Present**
- Independent release-acceptance engineer for a macOS distributed-compute marketplace, serving as the physical-hardware validation gate between CI-green and fleet rollout
- Software Development Intern | AIOT Inc** **Internship**
- Internship focused on backend integration, application structure, and production-minded software practices

EDUCATION

- B.S. Data Science -- Saigon Business School, Vietnam** **Expected 2027**
- B.S. Software Engineering -- University of Computer Studies, Yangon** **2022 -- 2024**

PROJECTS

- Rental Property AI Platform**
- 10M-dataset-powered demand forecasting and gap analysis engine processing rental listings across 40 Indian cities (Python, Flask, Scikit-learn, Next.js)
- Ultimate ByteMe: Pan-Asian Real Estate Intelligence**
- Computational intelligence platform for the 1st Synergia International Conference 2026 with a LightGBM valuation engine, an investment opportunity scanner, and a RAG-grounded AI assistant on Qwen2.5/Gemini (Next.js, Python, Flask, LightGBM, Ollama)
- SBS Student Serving System**
- Full-stack academic platform for Saigon Business School with a Spring Boot 3 REST API and React 18 frontend, JWT authentication, and role-based access control (Java 21, Spring Boot 3, React 18, Docker, AWS S3)
- DataCleanr**
- AI-powered dataset cleaning app with industry detection across 12 sectors and automated CSV/Excel harmonization (Python, Cython, JavaScript)
- DentalBridge**
- AI treatment coordinator using Google Gemini 1.5 Pro to translate clinical terminology into patient-friendly guidance (FastAPI, Next.js)
- Kamisori**
- "Embrace the Future" -- e-commerce platform for a local clothing brand in Myanmar; architected a secure, scalable backend ensuring data integrity (PostgreSQL, Supabase, Edge Functions)
- Dental Blinding & Age Estimation**
- Internal pediatric dental age estimation system for the University of Dental Medicine, Mandalay, implementing the AlQahtani and Demirjian methods with a role-based Supervisor/PI blinding workflow to eliminate analysis bias (Python, Flask, PostgreSQL)

SKILLS

Programming: Python (Flask, FastAPI, Pandas, NumPy, Scikit-learn, LightGBM), Java (Spring Boot), Go, PHP, JavaScript/TypeScript, SQL

Software: Docker, Nginx, AWS (S3, EC2), PostgreSQL, MySQL, Git, GitHub, VPS/SSL, CI/CD
